Profile

I am a hard working and highly motivated dentist, currently undertaking a Coding Bootcamp course at University of Birmingham. My work ethos is based around providing optimum care for patients. I enjoy working in a dynamic fast-paced environment that is challenging and mentally stimulating. In order to be an ethical healthcare professional, I believe it is paramount to put patients' interest first and always make sure they are satisfied with their care.

- Confident in providing functional and cosmetic direct and indirect restorations (amalgam and composite), root canal fillings, dentures
- Part of the Eastman London Deanery, involving weekly study and teaching sessions at the UCL Eastman Institute and regional study days throughout London

COURSES AND ACHIEVEMENTS

Oral Surgery and Periodontology Course, UCL Eastman Institute 2015

Hands on minor oral surgery practicing flap design, tooth extraction and suturing techniques. Learning how to deal with oral surgery and periodontal complications; such as oral antral communications

Basic and Advanced Botulinum Toxin Course, London School of Facial Aesthetics 2015

Various techniques were taught, focusing on common areas such as forehead, crows and glabella. The course covered pharmacology, anatomy, indications, contraindications, legalities and dealing with complaints. After practicing on real patients throughout, I now feel confident in providing such procedures to my own patients.

Caries Management and Restoration Course, UCL Eastman Institute 2014

Diagnosing and interpretation of caries from radiographs; deciding on at what stage to monitor/treat. Biological consideration of how much caries needs to be removed. Hands on session; practicing restoration of large cavities.

Endodontic Special Study Module 2014

I developed a keen interest in endodontics in my final year and so attended endodontic special study taught by endodontic specialist Nick Adams and Phillip Tomson. I experienced the management of complex endodontic, use of pro-tapers system in root canal preparation and treating patients under specialist supervision.

SMILE Project Birmingham 2012

Part of the European Dental Students Association prevention programme. The aim was to promote oral hygiene, to over 1000 people over a 5 day period. Those involved filled out questionnaires related to their oral hygiene habits, diet, dental visits, etc. A presentation was then given on brushing techniques, ideal fluoride concentrations, daily sugar intake, smoking effects, diet advice, caries, and the importance of periodontal health.
